

Variable Group Exercise

This project is to be done in groups of 2, preferable no more than 3 people. The goal is to learn how to use variables in javascript. Each of the following results should be outputted to the console.

1. Define a variable that is an integer, and output the result to the console.
2. Define a variable that is a double/float, and output to the console.
3. Define a string and output the result to the console.
4. Define one number that is integer that is a float and one number that is a double/float.

Write operations that will:

- a. Add the numbers
 - b. Divide the numbers
 - c. Multiply the numbers
 - d. Subtract the numbers
 - e. Find the remainder
5. Create two variables that are strings. Combine the strings to a third variable and write them to the console.
 6. Create two variables, one that is a string and one that is an integer. Combine them and write the results to the console.
