

Functions Exercise

Do the following exercises on functions as a class.

**// 1) Write a function that does not take any arguments, and it logs
// "Wow, it worked!" to the console**

**// 2) Write a function that does not take any arguments, and it returns
// your favorite movie as a string
// console.log the result**

**// 3) Write a function that takes one argument, a number, and
// multiplies that number by 100
// console.log the result**

**// 4) Write a function that takes one argument, your name, and puts
// your name in the middle of a sentence
// console.log the result**

**// 5) Write a function that takes three numbers as arguments and
// returns the largest number
// The numbers should be able to be specified in any order**

// 6) What do you think will happen here? Anything bad?

```
function conCat(first, second, third) {  
  return first + second + third;  
}
```

```
var result = conCat("What ", "gives? ");
```

```
console.log(result);
```

// Are you surprised?
